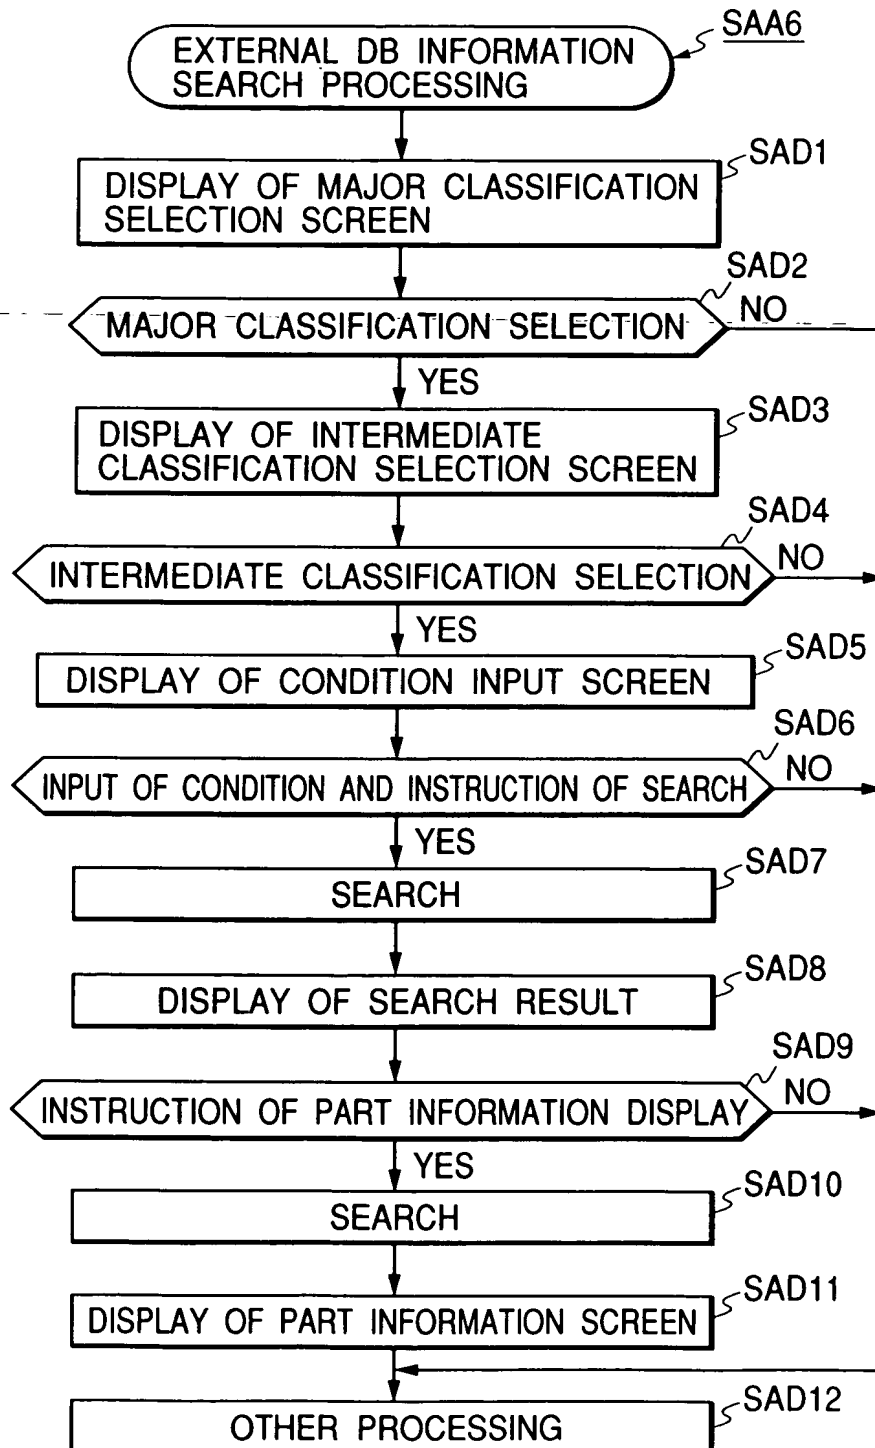

FIG. 8

The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the preferences and behaviors of potential customers. Once a need is identified, the next step is to develop a concept that addresses this need. This concept should be unique, valuable, and feasible. The third step is to create a prototype, which is a preliminary version of the product used to test the concept and gather feedback. The fourth step is to conduct a feasibility study, which evaluates the technical, financial, and operational aspects of the product. The final step is to develop a business plan, which outlines the strategy for launching and growing the product.
